 Mumbai Maharashtra

Exceptionally creative and dependable Full Stack Web Developer. Proficient in building responsive user interfaces and web applications. Proficient in programming languages including HTML, CSS, and JavaScript.

Projects

- ### E-Commerce Website

 - Define the basic features and functionalities your e-commerce site should have (product listing, cart, etc.)
 - Create a server using Express.js, Set up routes for handling requests related to products and users.
 - Connect to MongoDB using Mongoose and define models for products, users, and orders.
 - Implement CRUD (Create, Read, Update, Delete) operations for managing products and user data.
 - Set up a React.js project, design and implement components for product listing, product details, cart, and user authentication.
 - Test the entire application to ensure all features work seamlessly together.
 - Implement user authentication using JWT tokens, and allow users to register, log in, and log out.
- ### Dynamic Form

 - Design a clean HTML structure with form elements such as text inputs, select boxes, checkboxes, Radio button and buttons.
 - Integrate JavaScript into your HTML to dynamically manipulate form elements and respond to user actions.
 - Use event listeners to capture user actions, such as button clicks or form submissions.
 - Implement logic to dynamically add or remove form elements based on user interactions. For instance, adding a new input field when a user clicks a button.
 - Apply CSS styles for a visually appealing and cohesive design.
